 Your loved ones are fine...

QCare

Stay Informed
About Your Loved
Ones' Well-being

QCare Provides You and Your Loved Ones with Age and Situation Appropriate Help

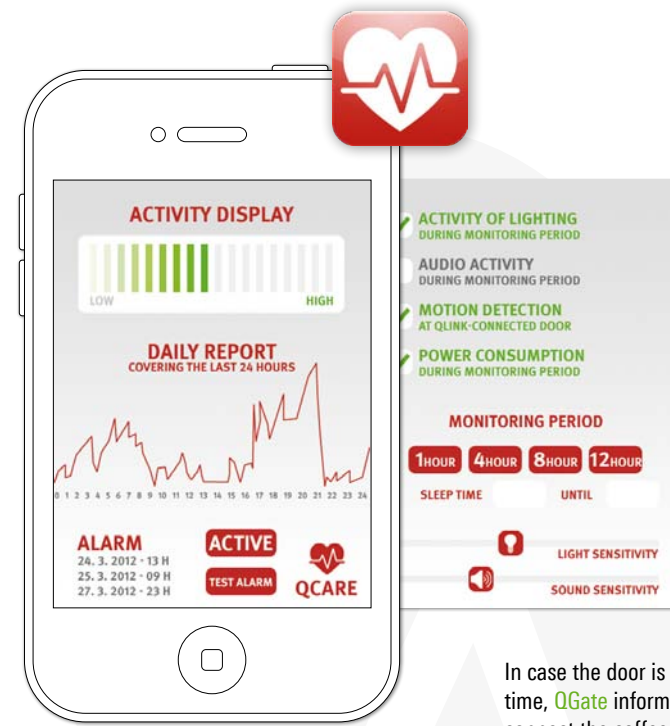

Stay informed about your loved ones' activities – and feel safe!

Do your grandparents / parents live alone? Worried about them having trips, falls or accidents? Do you want to keep track of their well-being twenty-four-seven? Using the QApp QCare, your QGate monitors your loved ones' living spaces for you. Your QGate stays in constant touch with you via your smartphone. QGate listens into a room and registers sound. In case no activity is registered over a certain predefined period of time, an alarm is triggered and forwarded to you via text message or e-mail.

QGate gives you confidence that your loved one's well-being is fine – even when you are not around. Plug in your QGate, register it at www.qgate.com, download the QApp QChalet and know your loved ones safe wherever you are.

24/7 Reliability No Landline or WLAN Required

- „QGate“ base station with embedded light and temperature sensor, microphone and powermeter
- „QLink“ radio sensor with window / door contact function (available 2013)
- Operation by QApp QCare via smartphone or web browser
- Automatic alarm via text message or e-mail

And that's how it works

After registering your QGate it is in permanent contact with your smartphone. With the QApp QCare you determine in which cases you want to be notified via text message or e-mail. Stick the QLink to the bedroom or bathroom door.

In case the door is not opened for a certain predefined period of time, QGate informs you via text message or e-mail. Additionally connect the coffee machine or another electrical device which is used daily by your loved ones to your QGate. In case the electrical device of your choice is not used over a certain predefined period of time, an alarm is triggered and also forwarded to you. You can also switch the QGate-connected electrical device on or off via smartphone or web browser.

Quick Guide

Plug your QGate into the next socket and connect a regularly used electrical device to it (e.g. coffee machine, electric kettle etc.).

Go to www.qgate.com and register your QGate using the enclosed QGate SN and Key.

Fill in your phone number and e-mail address for forwarding alarm messages.

Stick your QLink for instance to the bedroom or bathroom door.

Download the QApp QCare, take a test alarm to check the alarm function an adjust everything to your personal safety needs.
