

## QGate @ NEXT Berlin

The Austrian start-up company QGate presents its innovative ideas & solutions concerning „The Internet of Things“ in Berlin

Vienna, Austria – Digital technologies have changed our everyday life radically. How these changes have influenced our lives, which strategies and innovations have emerged therefrom and how our digital future could look like will be commented, discussed and presented at the leading European Conference for the digital industry – NEXT Berlin 2012 – from May 8th to May 9th 2012.

The conference’s six theme tracks – technology, creative, start-ups, mobile, fashion and experience – offer the perfect stage for the Austrian start-up company QGate to present its innovative ideas and solutions concerning the vision of „The Internet of Things“ to marketing decision makers, business developers, engineers and creatives.

QGate combines state-of-the-art design with intelligent technology and connects your home to your smartphone. Every electric device can be connected to the QGate socket and with the help of intelligent apps remotely managed and controlled by smartphone all over the world.

QGate informs the user for instance when the room temperature is sinking, the energy consumption of the refrigerator is too high or the children are spending too much time watching TV. The great variety of QApps as well as the open app development platform which enables users to create their own apps offer an almost limitless range of uses. The information exchange between QGate and smartphone works with GSM connectivity and does not require complicated WLAN-installation. This solution was developed in cooperation with QGate’s partner Deutsche Telekom M2M Competence Center.
