

Green Gadget Meets Green Festival

QGate presents green gadget at Austria's first green festival

From May 25 – May 26 2012 Tomorrow Festival – organized by the Austrian environmental organization GLOBAL 2000 – takes place at the area of the never operated nuclear power plant in Zwentendorf, Lower Austria. The festival is the kick off event for the planned European Citizens' Initiative against nuclear power and sets new standards in the matter of ecofriendliness for festivals.

The Austrian start-up company QGate presents its green gadget on the spot and takes an active part in environmental protection. QGate connects your home to your smartphone and thus helps to use energy sustainably. Every electric device can be connected to the QGate plug and with the help of intelligent apps remotely managed and controlled by smartphone all over the world.

The QApp QEnergy for instance helps to demask electricity hogs even when you are en route. The QApp ECO-Switch registers the sleep mode of electric devices and switches them off automatically to save energy. The QApp wattQmeter gives an overview of the energy consumption of a QGate-connected device which can also be switched off via smartphone if necessary. Discover more QApps at the QAppstore at www.qgate.com or directly at our festival booth. Innovative ideas and a competition are awaiting the festival guests.

To keep the festival visitors up to date, QGate has developed a festival app which can be downloaded at www.tomorriw-festival.at/app. The app contains among others information on the line up and of course more about QGate.
